

# The education role of improving the efficient innovative pedagogy

G. Jumayeva & M. Abdusamatova

**Abstract**— An in-depth analysis of internal and external factors influencing the development of qualified cadres who have a profound knowledge of contemporary knowledge needs to be made. President of the Republic of Uzbekistan Sh.Mirziyoev emphasized the following points. The critical analysis of education and science, the state's youth policy, the introduction of new and up-to-date methods of education, including information and communication technologies made. It is also important to solve another problem: the level of professionalism of teachers and professors, their special knowledge. In this regard, it is necessary to create an environment that promotes education, spiritual and enlightenment, and the formation of true values.

**Index Terms**— innovative, technology, interactive methods, acme ology, talent, talent, creativity, pedagogical conditions.

## 1 INTRODUCTION

In the "High Spirituality-Impotent Power", which has seen the face of the world through many years of life experience, our young people are convinced that not only our faith and our future but the decisive force of our present and future, and the decisive force - has been substantiated.

At the same time, "While we are mobilizing all our strengths and abilities for our people to be no less in the world, to make our children stronger, more knowledgeable, wiser and happier than we are, the issue of spiritual training is undoubtedly of utmost importance. If we lose our sense of urgency, determination and responsibility in this matter and leave this crucial task on its own, we can deviate from our spiritual values, our historical memory, and ultimately turn the path of universal development, which we seek." Precautionary measures demonstrated.

## 2 MODERN TEACHING TECHNOLOGIES

### 2.1. History of interactive methods

At the center of the new pedagogical technology is the head of the educational process and the teacher and students - the subject and the object of the process. By this purpose, the demands of the teacher and the educational process, the principles and ways of organizing and managing the education. The ways in which the student learns mental and physical development, collaborate, read and learn, to communicate with them, to eliminate problems and disagreements, to create a creative, business environment in the audience, to be able to accurately and concrete assess student activities. Advanced teaching and learning technologies.

One of the crucial requirements for the organization of modern education requires high pedagogical skills in order to achieve high results in a short time, without excessive physical and mental effort.

Today, in developed countries, a great deal of experience

accumulated and called interactive methods. Since 1996, theoretical and practical knowledge on the use of the interactive methods and their use in organization of educational process among the employees of education system of our country promoted.

## 2.2 Educational activities

One of the technologies that we use in practice and has had a positive effect is the "Blitz-game" method. This technology is designed to teach students the right sequence of movements, logical thinking, the basis of the subject, and the ability to choose the different points of view and information. Throughout this technology, students can communicate their own ideas to others.

Objective: The "blitz-game" technology helps students to independently determine the sequence of actions displayed on the papers, and then to share their ideas or share their thoughts with others.

Understanding the necessity of reforming the education system, in practice, requires the inclusion of educational institutions in innovative activities, the ability to see themselves in an innovative field, and most importantly.

It is possible to understand the old generation, who is very attentive to all innovations, educated in the past, wealth and experience, as well as teachers who do not want any change. In this case, it is important to understand that innovation processes are an integral part of our lives today.

It must be noted that the innovative activity of the teacher includes the analysis and evaluation of novelty, formulation of the purpose and concept of future actions, implementation and adjustment of this plan, and effectiveness assessment. The effectiveness of innovation activities is determined by pedagogical personality.

Preparation of the teacher for innovative activity should be carried out in two ways:

- Formation of innovative forms of innovation;
- to train new ones.

Innovative activity of the teacher of the higher school is one of the main problems of the higher school pedagogics. One of the most important components of the innovative activity of the instructor is the high professionalism - Acme ology, the Greek word for the highest point, the most elegant period, the highest professionalism. Professional intellect means maturity and skill. Factors for achieving

high professionalism are as follows:

- talent marks;
- Flexibility;
- ability;
- talent;
- Family education;
- educational institution;
- Your own behavior.

## 3 Acme ology

Acme ology is a scientifically contextualized in terms of professionalism and creativity. The following categories are distinguished:

- Creative personality;
- The process of its own growth and prosperity;
- Creative experience as part of their capacity building.

The creative personality of the teacher is as follows:

- Intellectual - creative initiative;
- Intelligence of breadth and depth of knowledge;
- Critical care for controversy, a critical approach to creativity, the ability to counteract creativity;
- The thirst for information, the feeling of non-compliance with the problem, and the feeling of emotion, professionalism, and eagerness to news.

Creativity is one of the most important ingredient innovation activities. The concept of creativity has appeared in the 1960s in Anglo-American psychology. It gives the individual the ability and the ability to create new insights and build new skills.

The instructor's innovative activity is directly related to the interests of the students, and the ability to learn. If the reader accepts updates and strives for himself, the quality of the learning process will increase further.

Each teacher should concentrate his attention on a problematic situation in the classroom, the development of the lesson, its purpose, and the expected outcome. In this case, the teacher will be able to increase the child's interest in the lesson through the use of various visual aids and handouts, lectures, various posters, supplementary literature, gaming technologies, Keys and technology, such as computer, graphic organizers, multimedia, and anatomy. The use of

innovative technologies should be the main criterion for closely monitoring the child's creative approach to lesson and neglecting it. In such a situation, Sh.A. Amanashvili states in the human personality technology: "By revealing the personal qualities of the child, he is able to create, develop and educate his noble human qualities, to glorify the heart and heart of the child, to develop and shape the forces of childhood, to create conditions for knowledge and skills. "

Whether, in other ways, the formation of knowledge, skills and abilities in the technology of acceleration of V.F. Shatalov's targeted teaching;

It promotes the technology of training and education of all children with any individual characteristics. Modernization of the education system is based on the needs of the state and society as well as the needs of the individual for quality education. Pedagogical innovations describe the gradual acquisition of innovation in pedagogical activity. The didactic capabilities of pedagogical innovations are improving the education system and process.

#### 4 CONCLUSION

Innovative activity of the teacher is a motivating, encouraging, creative stimulus of the pedagogical community and guarantees the quality of the educational process. That is why every teacher should be able to apply consistently to his / her work, fully understanding the essence of innovation.

We, all teachers and pedagogues, should be aware of our hard work and dedication to our country - to serve our people at the highest level in our spiritual duty and intellectual capacity.
